/Mark S. Graham/  
Primary Examiner, Art Unit 3711

The following is an examiner's statement of reasons for allowance:

Chang '393 and McCarty '051 are considered the prior art closest in scope to the allowed claim. Neither reference taken alone or in combination with the other prior art of record is seen to suggest the claimed invention.

With regard to Chang a cue shaft which varies continuously from the front end towards the back end is disclosed. However, in Chang it is the wood core which is varied in thickness to achieve the continuous variance while the composite skin stays at a constant thickness. Thus Chang teaches in opposition to the instantly claimed invention.

Concerning McCarty a cue shaft which has a continuously varying composite wall from a relatively forward position to a back position is disclosed. However, McCarty provides no suggestion to include a wood core or any other type of core in the shaft. In fact McCarty teaches that to achieve the aims of his invention the shaft should be hollow so as to avoid weight and specifically claims the hollow bore to be a "void hollow bore." Therefore there would be no reason for one of ordinary skill in the art to want to include a core such as that in the instantly claimed invention in the McCarty cue.

Applicant's co-pending application 10/710,631 claims, and in particular claim 2, have also been considered for double-patenting issues, but it is the examiner's opinion that the "resilient plastic foam" of the claimed continuously increasing wall thickness composite cue does not provide a suggestion to use wood of the type claimed in the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
